How to Recover Deleted Photos from Your Phone: A Step-by-Step Guide

Losing precious photos from your phone can be devastating, whether due to accidental deletion, a software update, or a system crash. Fortunately, there are several methods to recover deleted photos, depending on your device and backup settings. This guide covers the most effective ways to retrieve lost images from both Android and iOS devices.

1. Check the Recently Deleted Folder (iPhone & Android)

Many smartphones have a built-in “Recently Deleted” or “Trash” folder where deleted photos are temporarily stored before permanent removal.

For iPhone (iOS):

1. Open the **Photos** app.
2. Tap **Albums** at the bottom.
3. Scroll down and select **Recently Deleted**.
4. Browse the deleted photos and select the ones you want to recover.
5. Tap **Recover** to restore them to your main gallery.

Note: Photos remain in the Recently Deleted folder for **30 days** before being permanently erased.

For Android (Google Photos & Gallery Apps):

- **Google Photos:**
 - Open the **Google Photos** app.
 - Tap **Library** at the bottom.
 - Select **Trash** (or **Bin** in some regions).
 - Long-press the photos you want to restore.
 - Tap **Restore** to recover them.

Note: Deleted photos stay in the Trash for **60 days** before permanent deletion.

- **Samsung Gallery (or other manufacturer apps):**
 - Open the **Gallery** app.

- Tap the **three-line menu** (☰) and select **Trash**.
- Select the photos and tap **Restore**.

2. Restore from Cloud Backups

If you regularly back up your phone to cloud services like **iCloud**, **Google Drive**, or **Samsung Cloud**, you may be able to recover deleted photos from there.

For iPhone (iCloud Backup):

1. Go to **Settings** > [Your Name] > **iCloud** > **Photos**.
2. Ensure **iCloud Photos** is enabled.
3. If you have a recent backup, you can restore your phone to an earlier state:
4. Go to **Settings** > **General** > **Transfer or Reset iPhone** > **Erase All Content and Settings**.
5. During setup, choose **Restore from iCloud Backup** and select the most recent backup containing your photos.

Note: This will erase current data, so only use this method if necessary.

For Android (Google Photos & Google Drive):

- **Google Photos:**
 - If you had **Backup & Sync** enabled, deleted photos may still be in the cloud.
- Open **Google Photos** > **Trash** and restore them.
- **Google Drive:**
 - Open **Google Drive** and check the **Backups** section.
 - If you have a phone backup, you may extract photos from it.
